

## This site I like

### GenPORT, your gateway to gender and science resources

[www.genderportal.eu](http://www.genderportal.eu)

#### A Portal for sharing knowledge and inspiring collaborative action on gender and science

GenPORT ([www.genderportal.eu](http://www.genderportal.eu)) is an EU FP7 project coordinated by the Open University of Catalonia (Spain), with PORTIA (UK), Fondazione Giacomo Brodolini (Italy), Universitas de Matthiae Belli (Slovakia), Örebro Universitet (Sweden) and GESIS (Germany) as partners.

GenPORT is a community sourced internet portal, offering an open collaborative environment for exchanging resources and knowledge on gender across all sciences, ie natural and social sciences, and humanities.

This online community is composed of researchers, practitioners and policy-makers across the globe interested in gender equality and excellence in science, technology and innovation. The portal addresses both experts and non-expert on gender alike.

Gender experts may join the E2E (expert to expert) database, share their contributions on gender and science and exchange their experiences with the rest of the community. The E2E aims to provide easy access to gender experts across all scientific areas in order to facilitate the integration of a gender dimension into research and research funding decision making. For non-experts, the portal provides a first orientation regarding the multiple dimensions of “gender” and how to progressively tackle the different the gender dimensions in research and or implementing gender equality measures in research institutions.

The available information is constantly updated by its community of users. This open collaborative way of working encourages mutual responsiveness and allows the incorporation of the new findings.

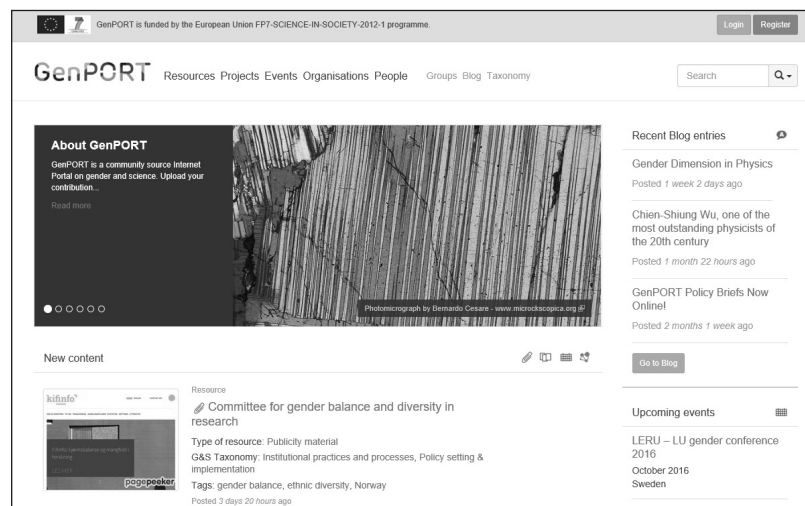

Moreover, GenPORT offers to all interested parties online discussion forums where users from across the globe can gather to discuss emergent topics related to gender in science. This service is open to all GenPORT subscribers and free of charge.

#### An Opportunity for Scientific Editors

GenPORT is of particular interest to scientific editors in their role of assuring excellence and accountability in science. GenPORT hosts already a variety of resources to reduce gender bias in research.

As a member of GenPORT you will be able to:

- Share and find recommendations of how to integrate sex and gender in research content and publications for

your journal, authors or for yourself. A good example is the SAGER (Sex and Gender Equality in Research) Guidelines elaborated by the EASE Gender Policy Committee.

- Upload articles of your journals and make them known within the community on gender and science.
- Discover research across the disciplines which integrates a sex and gender dimensions. These provide concrete examples how gender can boost the quality of research outcomes in such diverse areas as physics, climate action or transport.
- Identify guidelines, measures and good practices of how gender diversity in teams can be promoted in order to assure gender equality in research organisations.
- Take part of E2E (expert to expert) data base so that others can easily find you and your expertise on gender.
- Be involved in the activities of the GenPORT community as a participant or as organizer of a new group to start to discuss specific topics on gender and science with a global community.

We encourage you to take part of this lively and in crescendo community that today already counts with more than 800 resources and more than 350 members from all over the world. Join the gender and science community!
